

JOBERT POYLAN JR

Iloilo City, Western Visayas, Philippines, 5000

+63 963 729 4502 | jobertdev27@gmail.com | <https://www.linkedin.com/in/jobert-poylan-jr/> | github.com/JobertDev27/ | <https://jobertdev27.github.io/portfolio-v.2/>

SKILLS

Frontend: React.js, Next.js, TypeScript, Tailwind CSS

Backend: Node.js, Express.js, Supabase

Database: PostgreSQL,

Tools: Git, Linux, Bash, Arduino (Embedded Systems)

EXPERIENCE

Office Assistant – Iloilo City Government

May 2024 – June 2024

- Assisted with digital documentation, encoding, scheduling, and administrative workflows in a fast-paced office environment.

PROJECTS

RyderTracker | React.js, TypeScript, Next.js, Tailwind, Servist, PWA, Charts.js

Code: <https://github.com/JobertDev27/ryder-tracker> | Live: <https://ryder-tracker.vercel.app/>

- Built and deployed a PWA delivery and finance tracker designed for a delivery rider's daily workflow, prioritizing mobile performance and low-connectivity usage.
- Integrated Servist service workers for full offline functionality and implemented Chart.js dashboards to visualize delivery progress and earnings over time.
- Used daily by a delivery rider to track 20+ deliveries and monitor earnings.

NextUP | React Native, TypeScript, Socket.io, Express.js, Arduino, sqlite3

Code: <https://github.com/JobertDev27/next-up>

- Built a real-time queue management system for school document requests, allowing students to select and queue requests through the app instead of waiting in line.
- Integrated Arduino-based ticket dispensers with a mobile interface to synchronize live queue status across 10+ concurrent users in real time.
- Designed the ticketing system to handle up to 10,000 unique active tickets without collision, automatically deleting tickets after 5 minutes of inactivity.

Yomutsugi | React.js, TypeScript, Supabase, PostgreSQL

Code: <https://github.com/JobertDev27/yomutsugi> | Live: <https://yomutsugi.netlify.app/>

- Developed an anime tracking web app with React.js and Supabase, integrating external APIs to sync show data with user-specific libraries and implementing PostgreSQL Row Level Security to ensure each user only accesses their own data.
- Designed a lean PostgreSQL schema by selecting and mapping only the relevant fields from external API responses, avoiding unnecessary data bloat.

EDUCATION

PHINMA University of Iloilo

B.S in Information Technology

Expected June 2028
